

Exercise 2: Shopping System

Objective

- Practice multiple variables and calculations
 - Apply arithmetic expressions and logical conditions
-

Input

- Product 1: name, quantity, price
- Product 2: name, quantity, price
- Product 3: name, quantity, price

Formula

$$\text{Total}_i = \text{Quantity}_i \times \text{Price}_i$$

$$\text{Subtotal} = \text{Total1} + \text{Total2} + \text{Total3}$$

$$\text{Tax} = \text{Subtotal} \times 0.08$$

If Subtotal > 200:

$$\text{Discount} = \text{Subtotal} \times 0.15$$

Else:

$$\text{Discount} = 0$$

$$\text{Final Bill} = \text{Subtotal} + \text{Tax} - \text{Discount}$$

Output

===== SUPERMARKET RECEIPT =====

Item 1 : _____

Quantity : ____

Unit Price : \$____

Total : \$____

Item 2 : _____

Quantity : ____

Unit Price : \$____

Total : \$____

Item 3 : _____

Quantity : ____

Unit Price : \$____

Total : \$____

Subtotal : \$_____

Tax (8%) : \$_____

Discount : \$_____

FINAL BILL : \$_____
